

## Vision

To turn waste batteries into useful power sources for people who don't have reliable electricity.

## Mission

A world where no battery is wasted and no person is left without power.

## We make power banks from old batteries that still have power left

Round Trip  
Efficiency

# 91%

3 Input  
Ports  
(5V)

2 x USB  
Output Ports  
(5V)

Solar component

Built-in safety system  
and reset button

Real-time  
battery indicator

Uses 24 reused  
battery cells

Multiple  
charging ports

### COLLECT

Gather discarded Li-ion  
batteries

### TEST & SORT

Assess battery health  
and filter usable cells

## HOW IT WORKS?

### FEEDBACK AND INTEGRATION

Collect feedback from users  
and improve future use cases

### DEPLOY & SELL

Sell select use cases to  
generate funds

### BUILD USE CASES

Create power-packed  
solutions from usable cells.

## 100+

Individuals directly engaged  
including recyclers, technicians and early users

## 2500+

Individuals indirectly impacted  
Communities, market vendors and students reached

## 10,000+

People reached  
Social media, innovation events and awareness campaigns

## Why Choose Vidyuta?

- **Built from waste** : cheap + eco-friendly
- **Solar powered**: works without electricity
- **Smart safety system**: prevents damage
- **Custom-designed**: built from scratch

## Use Cases

**Street Vendor**  
Power banks let vendors plug in fans and lights right at their stalls.

**Student**  
In low-electricity zones to keep students connected during outages.

**Mountaineer**  
Reliable power off the grid for adventurers

## How Big is the Market?

**\$4.7 billion**  
Global second-life battery market

**\$3-4 billion**  
Asia-Pacific reuse market

## Targeted SDGs
